

David Korenblit | github| LinkedIn

Machine Learning Engineer

Machine Learning Engineer (B.Sc. CS) specializing in end-to-end Machine Learning systems, NLP/LLM pipelines, and Computer Vision. Proficient in Python, PyTorch, Hugging Face, Scikit-Learn, and Docker. Experienced across the full machine learning lifecycle from data ingestion and telemetry modeling to training, rigorous evaluation, and production deployment. Skilled at leveraging modern AI tooling (Cursor, Claude Code) for rapid prototyping and clean architectural engineering.

CONTACT

Phone: +972-58-6588024

Email: dycoren18@gmail.com

SKILLS

Languages: Python & C++

Machine Learning & Deep Learning:

PyTorch, Hugging Face, Scikit-Learn, XGBoost, Pandas, NumPy, Feature Engineering, Model Evaluation, Computer Vision (OpenCV, CLIP)

LLMs & GenAI Workflows:

LLM Fine-Tuning & Prompt Engineering

Tools, Deployment & Infrastructure:

Git & GitHub, Docker, Linux, FastAPI, Azure

EDUCATION

B.Sc. in Computer Science |
Hadassah Academic College,
Jerusalem

2022 – 2026

LANGUAGES

Hebrew – Native

English – Advanced

WORK EXPERIENCE

PROJECTS

AIAC - AI Assistant Coach (Python, Hugging Face) | 2025-2026 | [Demo](#)

- **End-to-End ML Pipeline:** Built a multi-tier ML pipeline processing time-series telemetry data across 4,900+ games.
- **Modeling & Evaluation:** Integrated **Hugging Face** transformers with gradient boosting, creating an automated decision engine that identified 98% of critical edge cases while preventing overfitting.
- **Infrastructure:** Designed a low-latency, custom data and inference architecture from scratch.

Semantic Video Retrieval Engine (In Progress)

- **Multimodal Search Pipeline:** Developed a video search engine using fine-tuned CLIP embeddings, **prompt engineering**, and LLM fine-tuning via local and integrated APIs for semantic retrieval.
- **Lifecycle & Evaluation:** Directed structured data annotation workflows for model evaluation and zero-shot retrieval benchmarking.
- **Deployment:** Containerized the pipeline using Docker to ensure reproducible environments and low-latency query execution.

VOLUNTEERING

- **"TecHeal" Hackathon:** Developed rapid technology infrastructure and minimum viable software applications within an agile team environment to support individuals coping with PTSD.
